

ExploreCME: A Smarter Way to Study

Personalized Learning Dashboard

The ExploreCME platform provides an intuitive, data-driven learning experience that helps students identify knowledge gaps, monitor progress, and generate highly targeted study materials.

After logging in, users have immediate access to a personalized dashboard that includes:

- **Performance Statistics** – View your overall percentage of correctly answered questions, total question attempts, and cumulative performance across the platform.
- **Knowledge Gap Analysis** – Interactive radar graphs display your performance by both **organ system** and **task area**, making it easy to identify strengths and prioritize areas requiring additional study.
- **Quiz Management** – The **My Quizzes** section provides quick access to every quiz you have created, allowing you to organize and continue your study sessions with ease.

Flexible Quiz Experience

The quiz management system is designed to accommodate different learning styles and study objectives.

For each quiz, users can:

- Review previous quiz attempts
- Resume incomplete quizzes
- Start a new attempt at any time

When beginning a quiz, three learning modes are available:

Test Mode

Designed to simulate an examination environment, Test Mode provides no immediate feedback until the quiz is complete.

Study Mode

Study Mode is available in two formats:

- **Without Explanations** – Displays the correct answer immediately after each question is submitted.
- **With Explanations** – Provides the correct answer along with a concise educational explanation to reinforce key learning concepts.

An additional feature available in Study Mode is **Global Statistics**, which displays overall performance data for each question, allowing users to compare their performance with the broader ExploreCME user community.

To support continuous improvement of the question bank, every question includes a simple **thumbs up/down** feedback option that allows users to report concerns or provide suggestions directly to the ExploreCME development team.

Intelligent Quiz Creation

Selecting the "**Let's See the Questions**" button from the home page provides access to two powerful methods for creating customized quizzes.

Build from Blueprint

This option allows users to design quizzes based on their own learning priorities by selecting:

- Organ systems
- Task areas
- Individual clinical topics
- Desired question distribution

The system first searches the existing question database for matching content. If additional questions are needed, ExploreCME's proprietary artificial intelligence engine automatically generates new questions that align with the selected blueprint. Each AI-generated question undergoes an automated validation process to verify clinical accuracy, educational quality, and appropriate difficulty before being added to the quiz.

Generate from Document

One of ExploreCME's most innovative features is the ability to create personalized quizzes directly from examination performance reports.

Users can upload score reports from:

- PAEA End of Rotation (EOR) examinations
- PACKRAT examinations
- PANCE score reports

The platform analyzes uploaded reports in real time to identify performance deficiencies across organ systems, task areas, and specific clinical topics. It then automatically

generates a targeted remediation quiz focused on those identified weaknesses, allowing learners to efficiently strengthen areas requiring improvement.

Quiz generation occurs in the background, and completed quizzes automatically appear in the **Select Quiz** screen. Depending on the number of questions requested, generation may take several minutes.

Dynamic Question Database

The ExploreCME question bank is continuously expanding. A database overview available on the home page provides users with up-to-date information regarding:

- Total number of available questions
- Distribution of questions across organ systems
- Distribution across task areas
- Overall database growth

This transparency allows users to understand the breadth of available study content as the platform continues to evolve.

Commitment to Quality

Educational quality is central to the ExploreCME mission. Every question within the database undergoes annual review and revalidation to ensure that:

- Clinical content remains current with evolving medical practice
- Answer choices remain accurate
- Educational explanations reflect the latest evidence-based guidelines
- Question quality and difficulty remain appropriate for healthcare professional learners

This ongoing review process ensures that ExploreCME continues to provide reliable, current, and high-quality study resources for students preparing for coursework, clinical rotations, and national certification examinations.

Need Assistance?

We're committed to providing the best possible experience. If you encounter any technical issues, have questions, or need assistance with any aspect of the platform, please contact our support team at customer.support@explorecom.com. We value your feedback and will work to resolve your concerns as quickly as possible.
